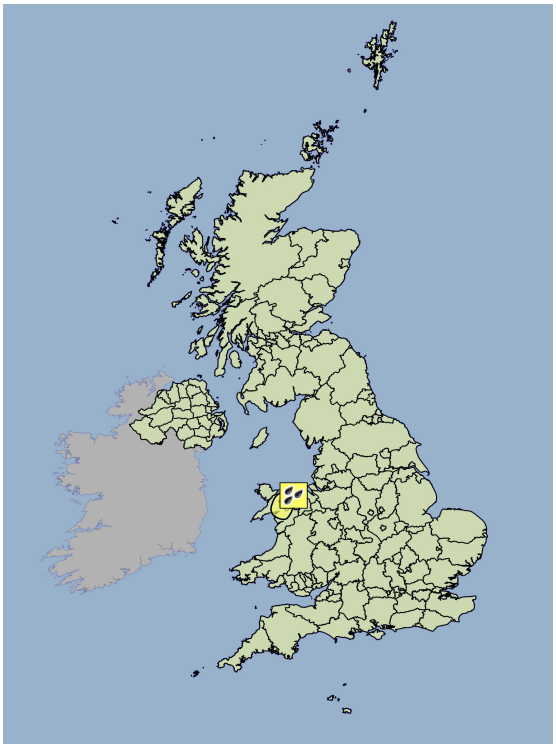
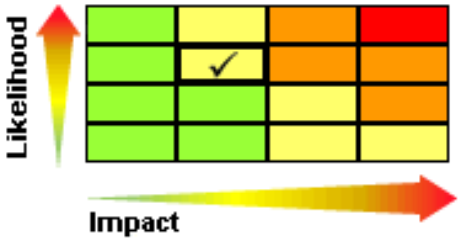
National Severe Weather Warning Service





Chief Forecasters Assessment
A deep area of low pressure is moving quickly north to the west of the UK, with warm and moist air being drawn north in the strengthening south to southwesterly flow, which will lead to heavy and persistent rain for parts of northwest Wales during this afternoon. An active cold front will move eastwards during the late afternoon, bringing further heavy rain, followed by a dry evening.

Rainfall totals of 20-30 mm are likely widely, with as much as 50 mm in a few places, this including very localised hourly totals of 10-15 mm.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **13:00 on Sun, 08th Nov 2015** until **18:00 on Sun, 08th Nov 2015**

Rain will become persistent and increasingly heavy, before clearing towards evening.

The public should be aware of the risk of local surface water flooding, whilst isolated river flooding is also possible as catchments are already wet after recent heavy rain.
